

Stewardship of the Built Environment

Professor Robert A. Young, University of Utah

Thursday, July 18 at 7:30 pm

Canyon Community Center

University of Utah Professor and Program Director of the College of Architecture and Planning Robert A. Young will discuss the topic of his recent book, *Stewardship of the Built Environment*, which explores historic preservation, adaptive reuse, sustainability, and community revitalization. Young will examine how communities can reduce the growth pressures on land through the sustainable reuse and preservation of existing buildings.

The Zion Canyon Field Institute's Fern and J. L. Crawford Lecture Series is a collaborative presentation of ZCFI and the Division of Resource Management in Zion National Park. This year, the lectures aim to broaden our understanding of our shared heritage within southern Utah, and to encourage and foster a continued culture of preservation. Lectures are hosted monthly and are free and open to the public. The next lecture, "Glen Canyon and the Colorado River: An Evolving Cultural Resource in the American West," will be held on Thursday, August 29 at 7:30 pm.
