

College Tennis Courts To Be Lighted Soon

Work is being completed this week on the lighting of one of the college tennis courts. The work is being done by the Dixie Power company and the NYA students.

It is hoped that business men will now avail themselves of the opportunity of playing tennis, as it is one of the finest conditioners for men who spend much of their time indoors. A drive will be made to gain memberships.

A meter is being installed, so that each one who uses the court will pay as he goes.

The tennis club, under the leadership of Elmer Pickett, is financing the project. It is the plan to pay off the indebtedness through club membership and playing fees.
