Wilson Research, Engineering
and Exploration Company
Box 14
Veyo, Washington Co., Utah

Att: Mr. Leroy A. Wilson

Gentlemen:

Thank you for your letter of August 7th concerning Vimlite. We are pleased to enclose a folder showing the two types of Vimlite we manufacture but we must advise that only the Plastic Mesh type is now available. It may be obtained direct from this Company in suitable quantities and will be shipped transportation prepaid at approximately 12.5¢ per square foot.

Your proposed experimentation with Vimlite sounds most interesting and we will be pleased to cooperate by furnishing reasonable amounts of material but we would not be interested in supplying you with 10,000 feet without cost.

If upon examination of the Plastic Mesh Vimlite and consideration of its price you wish to pursue the matter further, we would be pleased to hear from you and to work with you in any possible way.

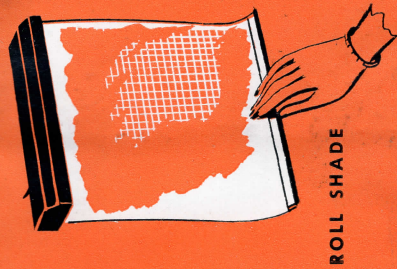

Yours truly,

CELANESE PLASTICS CORPORATION

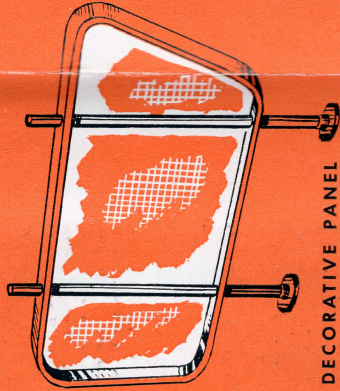

F. C. Williams

VIMLITE* OFFERS SHATTERPROOF SAFETY ... PRIVACY ... INSULATION ... EASY INSTALLATION

VIMLITE is the ideal material for glazing poultry and other farm buildings, cold frames, storm sash, sun rooms and greenhouses. Vimlite gives growing things the benefit of the sun's ultra-violet rays. It holds heat in—keeping interiors warm and dry. Both types of Vimlite can be used in these applications.

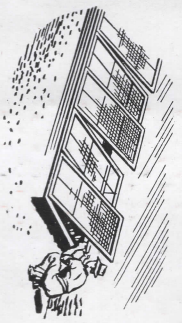

Factory, stockroom and office partitions are easy to install when Vimlite is used. Vimlite diffuses light rays and thus pro-

vides for privacy without blocking light sources.

VIMLITE can be used to enclose special air conditioned areas . . . for machine guards for shatterproof interior skylights and protective screens of all types. Permanent and portable enclosures to guard against air borne contamination, dust, fumes or vapors can be made of Vimlite at a great saving of time and expense. Both types of Vimlite can be used in these applications.

USE VIMLITE FOR PLANTS

Vimlite glazed cold frames give seedlings a better start—get them through sudden cold snaps. Vimlite is hail-proof and shatterproof.

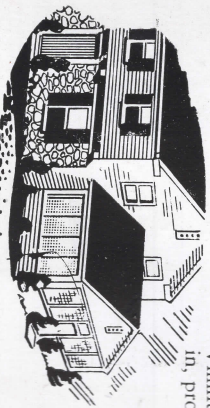

USE VIMLITE FOR HEALTH

Solaria, children's play-houses, sanitariums are ideal spots for Vimlite. With Vimlite they get the radiant heat of the sun and also its ultra-violet, health-building rays—with privacy.

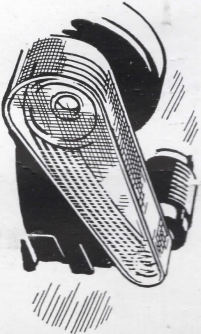

USE VIMLITE FOR INSULATION

In sun porches, storm sash, interior skylight sash, farm buildings, garage door, Vimlite glazing holds heat in, provides plenty of light.

USE VIMLITE FOR SAFETY GUARDS

Vimlite provides a strong, shatterproof protective shield for moving belts, conveyors, shafting, band-saws, splash aprons, fly-wheels and other moving equipment.

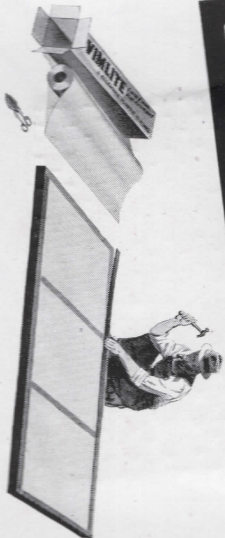

OTHER USES FOR VIMLITE

The applications for Vimlite are virtually endless—limited only to the imagination of the user. Here are just a few: store displays, stage scenery, photographic props, lamp shades, novelties, holiday decorations, background screens. In addition, plastic-mesh-type Vimlite can be produced on special order in many beautiful colors and color combinations for display and decorative applications.

VIMLITE
EASY TO INSTALL

LOOK FOR THE NAME VIMLITE ON THE SELVAGE

VIMLITE is easy to install. Simply cut to size with shears or snips, and tack in place using wood strips. Vimlite won't stretch or sag or pull frame out of shape after installation. For special effects, Vimlite can be sprayed with lacquer colors, bent to shape and otherwise fabricated.

PACKED CONVENIENTLY... AVAILABLE EVERYWHERE

VIMLITE is sold in rolls 28", 36" wide, 25', 50' and 100' long. Plastic mesh Vimlite is available only in 36" width. Vimlite can be obtained at leading hardware jobbers and dealers as well as wholesale lumber supply houses everywhere.

VIMLITE

Celanese Plastic Glazing

**TWO TYPES
PLASTIC MESH WIRE MESH**

On the farm—in the home, office, shop and factory—there are hundreds of places where a high quality, flexible, non-shattering glazing material is needed to answer special glazing requirements. These are the applications where ~~Vimlite~~ can be used with great efficiency and economy.

VIMLITE is clear Celanese plastic applied over wire or plastic mesh. Vimlite is tough, and has excellent weathering characteristics. Bursting strength is 200 lbs. per square inch for the wire type and 165 lbs. per square inch for the plastic type.

VIMLITE is translucent—gives privacy without blocking light sources. Vimlite offers health benefits because it transmits ultra-violet rays. Insulating value is high. Transmitted radiant heat is dissipated slowly—an important factor in maintaining overnight high temperatures in cold frames and farm buildings.

VIMLITE has an almost endless number of uses. You will find many of them described in this folder. The attached samples of Vimlite will suggest many more applications where you can use this versatile glazing material.
