Gentlemen:

Following yours of January 27th it is necessary to say that any reference to patents will not afford an accurate picture of our commercial operations. Moreover the patent situation is quite complicated and we must decline to send you this sort of information at this time. Unfortunately we are also not in position to send you the detailed description that you asked concerning our actual methods of manufacture.

A sample of the product as now manufactured is being forwarded to you along with some of our published literature.

Very truly yours,

General Manager
