Dear Sir:

Some time ago you wrote that you were interested in large quantities of oxygen if they could be procured cheap enough.

Here is the answer to your problem; you may buy our liquid air oxygen producing column complete with expansion engine, battery of air dryers and carbon dioxide removers with valves and piping on the column and on the battery of air dryers. Price: \$4000.00. You may see this equipment in operation at 640 N. 3rd. West St., Salt Lake City.

Reason for sale; we are replacing with a unit twice as big for our own use. The unit in question is not war surplus material, but was bought new after the war and is still in use by us and is now producing 25000 cu. ft. daily.

You would need a compressor and motor to go with this unit, but then you would be able to produce the same amount of oxygen as we are.

Sincerely yours,

ACETYLENE COMPANY OF UTAH

D. S. Jenkins, Mgr.
